Do you need high quality, experienced Oracle Applications Development support? Many Oracle Applications customers have unmet Oracle development needs due to lack of internal resources, or a lack of quality developer / analyst talent in their market area. Other companies may just have too many requests or multiple competing initiatives at a point in time. While the internal staff may be stretched and overwhelmed, there may not be headcount approval or enough of a need to add an additional full time resource.

O2Works Developer / Analysts on Call offering takes the risk out of supplementing Oracle development teams. Our experienced Developer / Analysts are all U.S. based, have 17-22 years of experience, and excellent communication skills. They are Developer / Analysts, not just coders. In addition to handling the analysis, design, and build, they have the experience to provide insight and alternative solutions. Once a solution is agreed upon, it is documented (MD 050 / 070), submitted for customer approval, and the effort is estimated. Following sign-off, the development takes place remotely. While this offering is typically delivered remotely, there is an opportunity for the developers to visit on-site if necessary.

This is a time and material offering so the customer has tight control over the expenditure. Additionally, the strong U.S. based resource pool eliminates the constant time and communication delay that plagues off-shore development offerings. Because of our resources' skill and experience, requests are handled directly by a single resource and it eliminates unnecessary hours and communication gaps. We also prefer to assign a developer / analyst to the same customer in order to benefit from their understanding of your environment, processes, and control procedures. For this offering, the discounted rate for some of the most senior skilled developer / analysts available anywhere is in the \$125 - \$140 per hour range excluding expenses.

There is a variety of items this service can address. They include such things as:

- Update existing or developing new inbound and outbound interfaces
- Modifying formats for checks or purchase orders
- Revise or implement bank feeds
- Improve and update report formats and information
- Renew personalizations
- OA Framework and Java development for EBS
- New or additional EDI or XML transactions
- Data conversion Support for acquisitions or divestures
- Upgrade dashboards
- Enhance / build BI Publisher, Reports Developer, and Discoverer reports
- Modify or overhaul workflows or AME
- Supplement your current staff during a project

No job is too small or project too large. We have a significant team of top notch developer / analysts who are available on short notice to provide valuable assistance to your team. We have dozens of clients who have benefitted from this highly flexible offering and are happy to provide references.
